

THE ORIGINAL INSECT-RESISTANT SOY ADHESIVE

SoyStrong ELX™ is your mark of assurance that hardwood plywood from States Industries meets the most rigorous standards for indoor air quality.

States total commitment to soy-based adhesives means that all veneer-cored panels are free from formaldehyde resins and are designated NAF for No-Added-Formaldehyde.

With our SoyStrong ELX product we have introduced an extra “element” during the manufacturing process. This new element protects our core veneer from insect attack.

An attack that often goes unseen until it's too late.

SoyStrong ELX utilizes micro-encapsulation technology that introduces an insecticide into the SoyStrong adhesive prior to panel layup. As the plywood panel is pressed and heated during the lamination process, the capsules release insecticide and bind it with the wood fibers. The insecticide permeates the wood fibers and protects the plywood from insect attack.

SOYSTRONG ELX MICRO-ENCAPSULATION TECHNOLOGY
ADDS PROTECTION AGAINST TERMITES AND OTHER
WOOD-BORING INSECTS.
